

QUICKVIEW

CS3202 HHP Kit

Specifications:

Operating Ambient Temperature

- -20 degrees C to 60 degrees C

Physical Size

- CS3202 Enclosure: 4"x2.25"x.5"
- CS1171 Handheld Programmer: 4"x3"x1"

CS3202 is a Hand Held Programmer. All CSLLC motor controllers are fully programmable. The CS3202 is a kit, which includes the CS1171 handheld programmer, a programmer Y-adapter, a programmer instruction manual, and all the necessary programming cables. The CS1171 handheld programmer gives the user the ability to program and change many parameters such as speed, acceleration, deceleration, and many more. The convenience of the handheld programmer is that the user can change these drive parameters while driving to quickly and easily optimize the drive feel. The CS1171 also has a debug feature, which allows the user to monitor several key measurements such as battery voltage, throttle voltage, drive speed, and many more. This debug feature gives the user the ability to easily and more accurately diagnose system failures in the field.

Please specify controller model number when ordering.
