

Turret Stand

For CS5200 Series

Features/Benefits

- Circular mounting plate simulating the roof of a vehicle with holes
- 4 tubular legs at a height suitable for user access and demo purposes
- Can be operated in automated or manual mode
- Support up to 110 K (253 lbs.)
- All steel construction

Description

The turret stand is a platform for attaching the turret as it would be in a vehicular application. It has a circular mounting plate simulating the roof of a vehicle with holes that match the mounting holes provided on the turret itself. The product is secured to the stand with 12 bolts.

This mounting plate is supported by 4 tubular legs at a height suitable for user access and demo purposes. Once the test unit is attached to the stand, it can be operated in automated or manual mode.
